BATHROOM CABINET

ELECTROSTATIC POWDER COATING STAINLESS STEEL PANEL

It is a surface treatment technology commonly used for metal surfaces. The basic process involves using an electrostatic field to attract powder coating to the surface of the workpiece, then heating it to 180C-200c to melt, flow, and cure the powder, forming a uniform coating

Advantages:

Durability: Powder coating creates a hard, durable finish that is resistant to scratching, chipping, fading, and wearing. It offers superior protection against environmental factors such as moisture, chemicals, and UV light.

Environmentally Friendly: No solvents, reducing VOC emissions.

Uniform Coating: Ensures even and smooth coverage and skin like finishing.

Corrosion Resistance: Protects against rust, corrosion and others environmental elements.

Stronger Adhesion: Strong bond to surfaces, leading to long-lasting results.

Low Maintenance: The tough, smooth surface of powder-coated products requires less maintenance and cleaning.

PVC COMPOSITE PANEL CABINET

- Water-resistant and durable
- Low-maintenance and easy to clean
- Resists warping and corrosion
- Available in various styles and finishes eco-friendly
- Ideal for modern bathrooms
